

#### Assignment #4

*Using C# Programming do the following:*

- 1) Implement a class called Money with following data members:
  - a) int rupees
  - b) int paise

Methods:

For the above class,

Implement constructors (all types), Accessor method for data members.

Overload following operators: +, -, ++, --

Provide implementations for GetHashCode and Equals method so that Objects of this class can be tested for equality and identity

Write a Test Program to test the above class.

**Note: Program should be according to convention followed in class codes.**
