Assignment #3
Using C#.Net Programming do the following:

Create a class called Patient with following :

Data Members:

  a) patientId

  b) patientName

  c) bedType   of type Int / Alternatively you can use Enum (Economy, Standard, Luxury)

  d) noOfDays

Member functions:

  a) Properties for respective members and Constructors

  b) getBillAmount

        amount = noOfDays * bedType (price)

        Where, bedType price will be:

                If bedType is 1 then price = 500

                If bedType is 2 then price = 350

                If bedType is 3 then price = 200

Derive a class called InHousePatient (Hospital Employees) from above Patient class with following:

Data Members:

  a) discount (in percent)

Member functions:

  a) Constructor and Properties

  b) getBillAmount

Where getBillAmount will be overridden to add discount from the data member only if the billing amount exceeds 5000 else the discount will be 5%.

Create a test program for above classes and implement following utility functions.

Implement Service Tax function which applies tax of 5% on Bill amounts > than 5000. 10% on Bill amount greater that 10000.

Note: Program should be according to convention followed in class codes.
