**Assignment #2**
*Using C# Programming do the following:*

1) **Create a Struct with following data members**

   a. **Id**

   b. **Age**

   c. **Sal**

   d. **Comm**

   e. **Static count**

   **Provide appropriate constructors to Initialise Instance**

   **Also provide GetIncome() as a member function which returns total Income**

   **Write a test program to test above struct Employee**

   **Also provide non-member method PrintEmployee which accepts employee type as a parameter (pass by value)**

   **Also provide non-member method InitialiseEmployee which accepts employee type as a out parameter (pass by ref with out)**

   **Also provide non-member method IncrementSal which accepts employee type as ref parameter (pass by ref ) and raises sal based on some logic**

**Note: Program should be according to convention followed in class codes.**
